

VAPT Report

Scan Type: Passive Scan

Top Vulnerabilities:

- Missing Anti-clickjacking Header (Medium)

Fix: Apply validation and security headers.

- Re-examine Cache-control Directives (Informational)

Fix: No action required.

- Content Security Policy (CSP) Header Not Set (Medium)

Fix: Apply validation and security headers.

- Retrieved from Cache (Informational)

Fix: No action required.

- Strict-Transport-Security Header Not Set (Low)

Fix: Review configuration.

- X-Content-Type-Options Header Missing (Low)

Fix: Review configuration.

Nmap Summary:

Starting Nmap 7.99 (<https://nmap.org>) at 2026-06-15 21:10 +0530 Nmap scan report for example.com (172.66.147.243) Host is up (0.0052s latency). Other addresses for example.com (not scanned): 104.20.23.154 2606:4700:10::ac42:93f3 2606:4700:10::6814:179a Not shown: 96 filtered tcp ports (no-response) PORT STATE SERVICE 80/tcp open http 443/tcp open https 8080/tcp open http-proxy 8443/tcp open https-alt Nmap done: 1 IP address (1 host up) scanned in 2.74 seconds

AI Security Analysis:

Executive Summary The passive scan for <https://example.com> completed successfully. The overall risk level is medium. 6 alerts were collected from ZAP. ## Risk Level Overall Rating: Medium High: 0 | Medium: 2 | Low: 2 | Informational: 2 ## Key Vulnerabilities - Missing Anti-clickjacking Header (Medium): The response does not protect against 'ClickJacking' attacks. It should include either Content-Security-Policy with 'frame-ancestors' directive or X-Frame-Options. - Re-examine Cache-control Directives (Informational): The cache-control header has not been set properly or is missing, allowing the browser and proxies to cache content. For static assets like css, js, or image files this might be intended, however, the resources should be - Content Security Policy (CSP) Header Not Set (Medium): Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everythi - Retrieved from Cache (Informational): The content was retrieved from a shared cache. If the response data is sensitive, personal or user-specific, this may result in sensitive information being leaked. In some cases, this may even result in a user gaining co - Strict-Transport-Security Header Not Set (Low): HTTP Strict Transport Security (HSTS) is a web security policy mechanism whereby a web server declares that complying user agents (such as a web browser) are to interact with it using only secure HTTPS connections (i.e. ## Network Exposure - 80/tcp open http - 443/tcp open https - 8080/tcp open http-proxy -

8443/tcp open https-alt ## Prioritized Recommendations 1. Fix all high-risk findings first. 2. Review medium-risk findings and add input validation, authentication, and security headers. 3. Retest after remediation to confirm the issue is resolved. 4. Reduce exposed services and close unnecessary ports.
